- **Pro-active Shipment Monitoring**
- **Daily Tracking Reports**
- **Release at Destination**
- **Single Point of Contact**

Customer Benefits

LaserNet will research the receivers rail capabilities and negotiate a through rail boxcar rate with origin rail carrier.

Car orders are placed directly with railroads and monitored until the empty is place for loading.

LaserNet waybills the boxcar shipment with the appropriate railroads immediately after car is loaded.

After the car has been billed and released, LaserNet tracks and traces the boxcar until it is placed at destination for unloading. If a car is delayed in transit, a problem log is generated with the rail carrier and an action plan is established to get he car back on track.

Tracking reports are sent to the shipper and consignee on a daily basis so the plans can be made for unloading at destination.

Once a car is empty at destination, LaserNet will release the empty car with the appropriate rail carrier.

As a single point of contact, we make the calls that need to be made allowing you the ability to re-allocate resources that would normally handle the day to day rail issues to other areas of your business.
